## Progress Delivers First UI for AngularJS 2 with Latest Telerik DevCraft Release

*New features and updates reaffirm company's position as the leader in responsive web apps, developer productivity, .NET and HTML5/JS innovation*

BEDFORD, Mass.--(BUSINESS WIRE)-- [Progress](#) (NASDAQ: PRGS) today announced the latest release of [Telerik® DevCraft™](#) suite, the most complete .NET toolbox for web, mobile and desktop development. The new release introduces support for AngularJS 2 Alpha, the **top-of-the-line JavaScript framework developed by Google, as well as significant enhancements to help developers** produce highly-responsive web apps for a multitude of platforms. Telerik, a Progress company, is the first to market in delivering UI for AngularJS 2.

### AngularJS 2 Support

Telerik has worked closely with Google to be one of the first organizations to support the latest advancements in AngularJS. With today's release, Telerik® Kendo UI®, part of the Telerik DevCraft suite, now supports both AngularJS 1.x and AngularJS 2 Preview, and is working towards support for AngularJS 2 Beta (coming in Q2). Early-adopters of AngularJS 2 can utilize the Telerik Kendo UI product to easily produce beautiful responsive web apps on top of the AngularJS 2 Preview.

"We have continued to iterate and extend our most successful products to meet market demand for supporting new web platforms, and we're proud to be among the first to support AngularJS 2," said Marina Hristova, Vice President, Product Marketing & Management, Telerik DevTools, Progress. "Our DevCraft offering extends beyond AngularJS 2 to include the full breadth of HTML5/JS and all .NET platforms. All our tools speed application development via intuitive APIs making Telerik DevCraft a complete developer solution."

### Responsive Web

With the Telerik Kendo UI, UI for [ASP.NET](#) MVC and UI for ASP.NET AJAX products, Telerik, a Progress company, has been long recognized as offering the most advanced responsive web UI on the market. Moreover, the company is the only vendor to provide such functionality for all popular web platforms—HTML5, Web Forms, MVC, PHP and JSP.

Today's release extends those capabilities with improved forward-thinking responsive web behaviors, new responsive demos and greatly enhanced mobile rendering and gesture support. In addition, the Telerik Web UI tools in the Telerik DevCraft suite enable developers to quickly and easily produce highly-responsive, touch-friendly web apps for the platform of their choice, using a plethora of new productivity improvements. These include new Visual Studio app templates and improved Smart Tags in UI for ASP.NET AJAX.

### Additional Advancements in Telerik DevCraft Q1 2016

- | Official release of Telerik UI for Universal Windows Platform for Windows 10 tool, supporting the latest Microsoft platform for cross-device app development. Includes more than 20 controls including Grid, ListView, AutoCompleteTextView and SideDrawer.
- | Telerik Report Server report sharing, integration with the Progress® OpenEdge® application and improved scheduling capabilities. Developers working on business apps can deploy Report Server and distribute pre-calculated reports to business owners with just a few mouse clicks. In addition, reports can be embedded in any .NET application directly from the Report Server.
- | Mobile UI tool advancements including a new AutoComplete TestView in UI for iOS and enhancements to ListView and DataForm for UI for Android.
- | Availability of Spreadsheet for Telerik Kendo UI, UI for MVC and UI for ASP.NET AJAX products.
