Modulus Launches First iOS App for Viewing and Managing Node.js Applications Running on its Platform

CINCINNATI--(BUSINESS WIRE)-- [Modulus](#), a Progress Company and a leading provider of Node.js hosting and MongoDB, today announced the availability of its native iOS mobile app, giving Node.js developers the ability to manage and monitor applications hosted on the Modulus™ platform using an Apple device.

The Modulus application allows users to manage all of their projects and databases, view performance metrics such as response time, CPU usage, memory, requests, and slow queries directly from a mobile device. Users can stream real-time logs from each application and receive real-time push-notification updates. In addition, they can respond to unexpected jumps in site traffic by scaling their applications instantly through the iOS app.

Advanced features of the application include:

- | Management of multiple accounts.
- | Servo management.
- | Enhanced project management functionality: stopping, starting, restarting, and scaling.

The Modulus app is available for free through the iTunes store. Download it now, [here](#).

Quote:

Charlie Key, Founder of Modulus, said: "Our customers are always on the move and looking for an easy way to manage and monitor their Node.js applications. Today, with our new native iOS application, they can manage, scale, and get real time alerts about how their applications are performing - directly from their Apple devices. We are thrilled to provide new tools that meet the needs of the Node.js community."
